Overview

This PowerOn allows the user to determine what action should automatically be taken upon maturity of their CD.

UX Run-Time Detail

Upon the user electing to run the program, the Banno UX displays an input form allowing the user to select, from a list of options, what will happen to their CD upon maturity.

- Increase Certificate Balance
- Change Certificate Term
- Transfer Certificate Balance
- Renew Certificate
- Disburse Funds by Check
- Suspend Certificate

The screenshot shows the Banno UX main menu. At the top, there are five blue buttons: 'Statements', 'CD Renew', 'Alert preferences', 'Settings', and 'Ask about this account'. The 'CD Renew' button is highlighted with a red rectangle. Below the buttons, there is a 'Details' section with a white background. It contains two sections: 'Account Numbers' with a 'Routing number' of '999999989' and 'Interest' with a 'Rate' of '2.35%'.

The screenshot shows the 'CD Renew' input screen. At the top, it says 'CD Renew' and '3 MONTH CERTIFICATE (x0330032)'. Below that, it says 'This account has a maturity date of 02/05/22.' The main question is 'What would you like this Certificate to do at maturity?'. Below this is a dropdown menu with the text 'Choose one *'. The dropdown is open, showing a list of options: 'Increase certificate balance', 'Change certificate term', 'Transfer certificate balance', 'Renew certificate', 'Disburse funds by check', and 'Suspend certificate'.

Depending upon the option selected by the user, another user input screen may be shown:

CD Renew
3 MONTH CERTIFICATE (x0350032)

This account has a maturity date of 02/05/22.

What would you like this Certificate to do at maturity?

Increase certificate balance

By this amount \$ 0.00

And transferred from this share

Choose one *

ⓘ If the account doesn't have available funds on 02/05/22, the renewal will be cancelled.

CD Renew
3 MONTH CERTIFICATE (x0350032)

This account has a maturity date of 02/05/22.

What would you like this Certificate to do at maturity?

Transfer certificate balance

Transfer the full maturing balance to this share:

Choose one *

CD Renew
3 MONTH CERTIFICATE (x0350032)

This account has a maturity date of 02/05/22.

What would you like this Certificate to do at maturity?

Renew certificate

Renew 3 MONTH CERTIFICATE for 3 Months on 02/05/22

CD Renew
3 MONTH CERTIFICATE (x0350032)

This account has a maturity date of 02/05/22.

What would you like this Certificate to do at maturity?

Disburse funds by check

Takes funds from your account and issues a check, payable to you.

Mail check to

THOMAS PROGRAMMER
or JANE E DOE
12345 MAIN STREET
DENVER CO 81233

If the transaction is confirmed, a check will be mailed to the address we have on file. It may take up to 7 days to receive the check.

CD Renew
3 MONTH CERTIFICATE (x0350032)

This account has a maturity date of 02/05/22.

What would you like this Certificate to do at maturity?

Suspend certificate

You have elected to suspend your certificate upon maturity. All funds will remain in the share until you transfer them out manually. The certificate will not accrue any further dividends.

CD Renew
3 MONTH CERTIFICATE (x0350032)

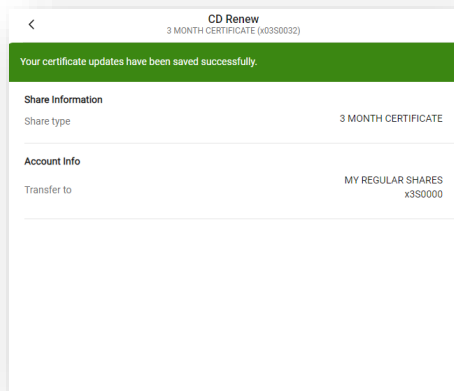

This account has a maturity date of 02/05/22.

What would you like this Certificate to do at maturity?

Change certificate term

ⓘ You'll need our assistance to make changes to this account.

Once a selection has been made and any required input completed, a confirmation screen will be presented with an overview of the option selected and the input received for final verification. Upon acceptance, the necessary actions will be completed based upon the request. For example – if the user elected to transfer funds out:

PowerOn Run-Time Detail

When first run by the member, Banno passes back to the PowerOn the account and share ID the member is reviewing options for. The program takes this info, reads the various parameter settings from the configuration Letter file and compiles information which is then passed to the Banno UX for display to the member. The data passed includes details about the chosen certificate: term, maturity date, minimum balance, current maturity renewal option, current share transfers set up and so on. Also passed to the UX are the certificate maturity options which the member will be able to select from.

Once the member has made their selection and based upon that selection, the PowerOn will update the member's certificate and any related transfer record(s) as needed.

Program setup & Installation

Required Files

- REPWRITERSPECS folder
 - BANNO.CDRENEW.V1.POW (Main PowerOn program)
 - Standard PowerOn library include files which should already be in your system
 - RD.GETDATA.DEF
 - RB.LISTEXPAND.DEF
 - RB.LISTEXPAND
 - [more?]
- LETTERSPECS folder
 - BANNO.CDRENEW.V1.CFG (Main program configuration Letter file.)

Installation steps

- Upload files to their respective directories
- Install the PowerOn program for demand use

- Add the PowerOn program name to SymXchange Common Parameters
- Refresh SymXchange
- Update the settings in the configuration Letter file. The configuration Letter file contains details for the various settings.
- Add the program to Banno People

Configuration Letter file

The configuration Letter file allows certain aspects of the program to be customized to better suit your needs. Among the options which can be set are:

- Restrict access to skips by account warning or calendar timeframe.
- Establish loan eligibility by loan type, service code, approval code, DQ Payment count, loan seasoning, minimum or maximum payment amount, minimum payment count, DQ payment history.
- Establish relationship code-based fee structures and set fee comment, fee sub-source code, and other action.
- Set maximum skips per rolling year or minimum time since last skip.
- Determine due date/maturity date advancement logic by payment frequency.

Database Interaction

Data Sources

Data utilized by the program is pulled from the following sources:

- Share and Loan record(s)
- Share and Loan Transfer record(s)

Transactions / File Maintenance Performed

Based upon the member's selected option, the following actions will be taken by the program:

Increase certificate balance

- Any existing share transfers type 2 (maturity) currently under the certificate will be expired or deleted (depending on the configuration parameter setting).
- A new share transfer type 3 (auto share transfer) will be created under the debit share and for the requested amount with the transfer date being set for the day before the certificate is set to mature.
- The certificate maturity code of the certificate will be set to 0 (renew)
- If the limit changes parameter is set to 1, a share note record will be added to the certificate.

Change certificate term

- Because of the potential complexities regarding changing the original terms of a renewing certificate, should the member elect this option, program output will refer them to contact their credit union representative.

Transfer certificate balance

- Any existing share transfers type 2 (maturity) currently under the certificate will be expired or deleted (depending on the configuration parameter setting).
- A new share transfer type 3 (auto share transfer) will be created under the certificate pointing to the desired account and share or loan to be credited on the maturity date of the certificate
- The certificate maturity code of the certificate will be set to 2 (transfer)
- If the limit changes parameter is set to 1, a share note record will be added to the certificate.

Renew certificate

- Any existing share transfers type 2 (maturity) currently under the certificate will be expired or deleted (depending on the configuration parameter setting).
- The certificate maturity code of the certificate will be set to 0 (renew)
- If the limit changes parameter is set to 1, a share note record will be added to the certificate.

Disburse funds by check

- Any existing share transfers type 2 (maturity) currently under the certificate will be expired or deleted (depending on the configuration parameter setting).
- The certificate maturity code of the certificate will be set to 1 (disburse)
- If the limit changes parameter is set to 1, a share note record will be added to the certificate.

Suspend certificate

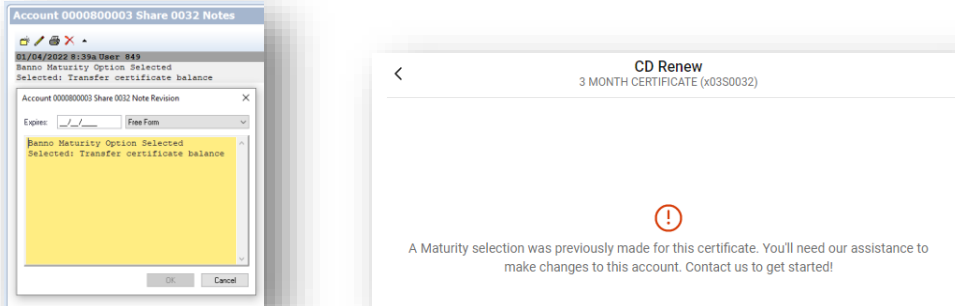

- Any existing share transfers type 2 (maturity) currently under the certificate will be expired or deleted (depending on the configuration parameter setting).
- The certificate maturity code of the certificate will be set to 3 (suspend)
- If the limit changes parameter is set to 1, a share note record will be added to the certificate.

Additional Information

Single or multiple changes

One of the settings in the parameter configuration Letter file is the ability to determine whether the user is allowed to make multiple changes to their certificate maturity option or just one time. If the parameter is set to limit the user change to just one time, the program will add a note record to the certificate.

Should the member attempt to change their maturity option at some point in the future, they will be given a polite request to contact the credit union. Deleting the note record under the certificate will also allow the user to register their selection once more.

Eligible shares for transfer out (renew option selected: transfer certificate balance)

When the program builds a list of eligible shares for transfer out, the logic used to determine whether a share is eligible to transfer funds from is determined by the "TRANSFER CERTIFICATE FUNDS **'TO'** SHARE TYPES" parameter setting in the configuration Letter file and whether or not a share has the correct service code(s) for transfer in as determined by SymXchange parameter settings.

Eligible shares for transfer out (renew option selected: increase certificate balance)

When the program builds a list of eligible shares for transfer out, the logic used to determine whether a share is eligible to transfer funds from is determined by the "TRANSFER FUNDS IN TO CERTIFICATE **'FROM'** SHARE TYPES" parameter setting in the configuration Letter file and whether or not a share has the correct service code(s) for transfer out as determined by SymXchange parameter settings.
