# Member to Member Transfers

This PowerOn allows the user to transfer funds to any credit union member providing they know the other member's account number, the share or loan ID and the first three letters of the primary member's last name (or business name). The user is also able to save, for later reuse, these alternate account numbers which are stored in External Account records on the user's account.

## UX Run-Time Detail

Upon the user electing to run the program, the Banno UX displays an input form allowing the following options:

- Create a new transfer to another account
  - » Immediate, one-time transfer
  - » Future dated, one-time transfer
  - » Recurring transfer
- Create a new transfer to a previously used (and saved) account
- Edit or delete an existing, active, scheduled transfer previously created

Transferring to a New Account or Previously Used Account

When setting up a transfer to another account the user is prompted for the first three letters of the last name (or business name) associated with the target account, the member number, the targeted type (share or loan) and the targeted share or loan ID.

Submitting the form will result in the PowerOn attempting to validate the entered account information. If the validation fails, the user will be offered another opportunity to reenter the information.

The image shows two versions of the 'Member to Member' form. The left form is the initial state with fields for Member name (tet), Member # (425764), Type (Share), and Share ID (0000). The right form shows the same fields but with an error message: 'We couldn't find the member you are trying to send money to. Please try again.' A blue arrow points from the left form to the right form, indicating a transition or validation step.

Once the input has been validated, the transfer input form will be displayed. When setting up a transfer to a previously used (and saved) member, the validation process is skipped over, and the user is immediately presented with the transfer input form.

The image shows the 'Member to Member' form with the transfer input form displayed. The form includes fields for Transferring to My other account, From (REGULAR CHECKING \$28,633.87), Amount (\$ 25.00), Frequency (Monthly), and Date (Friday, Jun 30). A 'Next' button is at the bottom.

Member to Member Transfers

The user enters the requested information and submits the information for final approval. Upon approval by the user:

- One-time, immediate transfers are performed immediately
- One-time, future dated and recurring transfers are set up with the creation of a share transfer record

Member to Member

Verify that the information for your member transfer is correct before continuing.

Editing or Deleting an Existing Transfer

If the UX displays any previously created scheduled transfers, the user will have the opportunity of selecting one to either delete or edit. Editing an existing transfer is limited to changing the amount, frequency and/or date. Electing to delete the transfer results in the transfer being expired. Should the user have inadvertently deleted a previously saved account, resulting in it being expired, manually deleting the transfer record's expiration date will make it accessible to the user once more.

## Deleting a Saved Account

If the UX displays any previously saved accounts, the user will have the opportunity to delete the saved account. The external account record will be expired, no longer accessible to the user through the program. Should the user inadvertently delete a previously saved account, manually deleting the external account record's expiration date will make it accessible to the user once more.

## PowerOn Run-Time Detail

When first run by the member, the program reads the various parameter settings from the Letter file, builds a list of the member's eligible shares to transfer from, a list of existing transfers and a list of any previously used member accounts the user had saved. It then passes this information to the Banno UX to be presented to the member.

If the parameter settings to limit transfers and/or amounts to a daily limit is turned on, the information passed to the UX will include the user's calculated daily count and amount limits along with the current daily counts/amounts.

Once the member has made their selection (create a new transfer, edit an existing transfer, or delete an existing transfer) those options are passed back to the PowerOn from the Banno UX and the PowerOn then performs the appropriate file maintenance and/or transfer on the member's account.

- For a new transfer, a share transfer record, type 3, is created under the share to be debited.
- When editing an existing transfer, the existing transfer is expired, and a new share transfer is created with the user's revised options.
- When deleting a transfer, the existing transfer's effective date is cleared, and the expiration date is set to the system date.

# Program Setup & Installation

## Required Files

- REPWRITERSPECS folder
  - » BANNO.M2MTRANSFERS.V3.POW (Main PowerOn Program)
  - » Main program support files
    - BNOLB.SLLISTBUILD.DEF
    - BNOLB.SLLISTBUILD.PRO
  - » Standard PowerOn library include files which should already be in your system:
    - RD.GETDATA.DEF
    - RB.LISTEXPAND.DEF
    - RB.LISTEXPAND
- LETTERSPECS folder
  - » BANNO.M2MTRANSFERS.V3.CFG (Main program configuration Letter file)

## Installation Steps

1. Upload files to their respective directories
  - » Recommend using Symitar PC Transfer.
2. Install the PowerOn programs for demand use
3. Add the Main PowerOn program name to SymXchange Common Parameters
4. In Device Control take SymXChange – Banno Off Host
5. Put SymXchange – Banno back On Host and verify Status = On Host
6. Update the settings in the configuration Letter file
  - » The configuration Letter file contains details for the various settings.
7. Add the program to Banno People
  - » If upgrading to a new version of the program, open a case with Banno Support to request assistance from the Custom PowerOn team with the upgrade.

## Configuration Letter File

The configuration Letter file allows certain aspects of the program to be customized to better suit your needs. Among the options which can be set are:

- Establish account eligibility.
  - » Based upon account type(s) or warning code(s).
- Establish transfer limits.
  - » By transfer count and/or single or aggregate transfer amount(s) – globally or on an account-by-account basis.
- Determine whether to allow transfers from cross-accounts.
- Establish whether transfers can be made from shares, loans, or both.
- Determine whether transfers can be made to other member's clubs or certificates.
- Determine whether the user can use the program to edit existing transfers not originally created by the program.
- Establish a default share comment to be prepended to the comment added by the user for one-time immediate transfers.
- Modify member name and share/loan ID description that is displayed to members.

- Indicate whether the program should be implemented in test mode.

# Database Interaction

## Data Sources

Data utilized by the program is pulled from the following sources:

- External Account Records are being utilized to track saved accounts by the member.
- The member's Preference record is used to track transfer counts and amounts performed on the system date by the member when transfer limitations are being utilized.
- Share transfer records are being utilized when the member is setting up recurring transfers.

## Transactions / File Maintenance Performed

The program performs the following transactions and/or file maintenance.

- **External Account Records**
  - » FINANCIALINSTITUTIONNAME
    - "M2M:" and the save name given by the user. The save name is limited to 20 characters.
    - Example – "M2M:Daughter's Checking"
  - » PRIMARYACCOUNTHOLDERNAME
    - The first three letters of the last name or business name of the target account.
  - » NUMBER
    - The account number and share/loan ID of the target account in the following format:
      - » aaaaaaaaaabcccc where 'a' is the 10-digit account number, 'b' is 'S' or 'L' for share or loan and 'c' is the share/loan ID.
      - » Example – "0000123456S0001" for account 000123456 Share 0001
  - » STATUS
    - "Approved"
  - » EXPIRATIONDATE
    - Set to the system date if member is 'deleting' the saved account.

- **Share Transfer Records**

» TYPE	Set to a type 3
» ACCOUNTNUMBER	Member number being credited by the transfer
» IDTYPE	Share (0) or loan (1) indicator
» ID	Share/Loan ID receiving the funds
» AMOUNT	Transfer amount
» EFFECTIVEDATE	Effective date of the share transfer record
» NEXTDATE	The next transfer date
» FREQUENCY	Transfer frequency
» DAY1	Transfer day 1
» DAY2	Second transfer day of the month for semimonthly

- **Preference Records**

If daily transfer amounts/counts are being tracked and enforced and the member is performing the first transfer for the day, the following Preference record fields will be reset to \$0.00 or 0 depending on the field.

- » XFERCOUNT
- » XFERAMOUNT
- » DEPCOUNT
- » DEPAMOUNT
- » WDCHECKCOUNT
- » WDCHECKAMOUNT
- » WDCASHCOUNT
- » WDCHECKAMOUNT
- » BILLPAYCOUNT
- » BILLPAYAMOUNT
- » LASTTRANDATE (set to system date)

If daily transfer amounts/counts are being tracked and enforced, and upon a successful transfer, the following fields will be updated in the member's Preference record:

- » LASTTRANDATE
  - Updated to the system date
- » XFERCOUNT
  - Updated with the new count (previous count + 1)
- » XFERAMOUNT
  - Updated with the new daily total (previous value + transfer amount)
- **Transactions**
  - » One-time transfers are performed immediately by the program

## Additional Information

### Preference Access Requirement

The user must have preference access type 3 (transfer to any account) on their account to use the program.

### Eligible Shares for Transfer In/Out

When the program validates the transfer to account information, the logic used to determine whether a share is eligible to transfer funds to is determined by things such as the share IRS code equal to 0 as well as service codes for transfer in values.

When the program builds a list of eligible shares for transfer out, the logic used to determine whether a share is eligible to transfer funds from is determined by common PowerOn library procedures and takes into consideration things such as cross-account access settings as well as service codes for transfer out values.

## Daily Limits Management

Through settings in the configuration Letter file, daily transfer limiting can be turned on which would limit the total number of transfers, total amount of transfers and the maximum single transfer amount which can be originated by the user on the system date. The limits can be set on a global basis or on an individual member by member basis. The global settings are established within the configuration Letter file parameters and the individual limits would be set in the member's Preference record settings. Individual member limitations will always override the global settings.

## External Account Records

In addition to being created by the program, these records can be created manually or by batch mode as long as the fields contain the correct data and are in the required format.
